

THE 2ND ANNUAL

Building Network Construction Conference

COPENHAGEN MARRIOTT 15 Nov. 2018

Meet developers, advisors and turnkey contractors on future construction projects in Scandinavia

SEIZE THE OPPORTUNITY to expand your activities in Scandinavia, which is investing heavily in urban and climate development, new infrastructure, high-rise buildings, offices, hotels, apartments, data centres, hospitals, research facilities and more.

The number of foreign contractors entering the Danish, Swedish and Norwegian construction sector is increasing day by day as the industry is eager to guarantee a sufficient number of skilled contractors, advisors, employees and equipment for the region's record number of new construction projects.

THE 2018 CONFERENCE, which will take place on 15 November, is aimed at developers, advisors, general turnkey and specialised contractors, as well as suppliers to the construction industry interested in exploring the possibility of expanding their business in Scandinavia and networking with new potential partners and suppliers.

Speed date with the stakeholders on future construction projects in the region. In just one day, you'll gain a wealth of knowledge about the pipeline of projects. During special speed dating activities interspersed throughout the day, you'll also have ample opportunity to network and speak individually with public and private developers, architects, engineers, contractors and suppliers.

BUILDING NETWORK AND COPENHAGEN CAPACITY have joined forces with various embassies and chambers of commerce to organise this exclusive second international networking conference on 15 November 2018. The conference will be in English and take place at Copenhagen Marriott Hotel.

REGISTER your interest in attending and whether you would like to present your skills and qualifications, advertise or become an exclusive partner for this year's Building Network Construction Conference.

COMMERCIAL CERTAINTY FOR THE BUILDING INDUSTRY

Denmark's construction industry boom and strong pipelines in the public and private sectors have seen an increase in inflated construction costs and delayed deliveries. Quantity surveying addresses these issues, reestablishing commercial certainty for investors, from feasibility to project execution.
